

EVS25 – Sustainable Mobility Revolution

Shenzhen, China, 5-9 November 2010

The World Battery, Hybrid and Fuel Cell Electric Vehicle Symposium and Exhibition, EVS in short, is the major most long-lasting symposium event in the electric vehicle history. EVS is the major event of the World Electric Vehicles Association ([WEVA](#)) which has three regional members, namely Electric Vehicle Association of Asia Pacific ([EVAAP](#)), European Association for Battery, Hybrid and Fuel Cell Electric Vehicles ([AVERE](#)) and Electric Drive Transportation Association of Americas ([EDTA](#)). EVS is rotating among Asia Pacific, Americas and Europe hosted by EVAAP, EDTA and AVERE respectively. The 25th Symposium [EVS 25](#) will take place in Shenzhen, China, between 5 and 9 November, 2010.

The EVS series began in 1969 as an academic forum for global networking and the exchange of technical information. As electric drive technologies progressed from classrooms and laboratories into the market place, EVS blossomed into an event encompassing most updated endeavors and initiatives, both scientific and business oriented.

Today, EVS is recognized as the global electric transportation industry's premier and largest forum, showcasing all forms of technologies in the market place and on the drawing boards – from various battery powered electric vehicles to fuel cell electric buses. The event attracts over the world academic, government and industry leaders who are interested in exploring and understanding the technical, policy, market challenges and development for a paradigm shift towards much wider application of electric transportation technologies.

With the theme “*Sustainable Mobility Revolution*”, **EVS25** will be the perfect platform for leaders from government, industry, scientific and technological circles as well as from all walks of life, including entrepreneurs, scholars, professionals and engineering practitioners, to have exchanges and to realize cooperation on latest technical achievements on electric vehicles. Surely, EV future developing direction and strategy, government policies, infrastructure construction, EV commercialization and industrialization, and innovation of high-end industry and related leading technologies will be the hot issues to be deliberated among the participants.

EVS25 will compose of different activities organized around four major axes:

- ✓ *the symposium*, where experts from all around the world will share their scientific, technical or social experience by presenting papers in either lecture or dialogue sessions
- ✓ *the exhibition*, which is the world's largest display of products for electric based transportation produced by vehicle manufacturers, component suppliers, infrastructure developers and related service suppliers
- ✓ *demonstration and Ride & Drive* will offer the opportunity to test electric vehicles on roads
- ✓ *EV Parade*, the preliminary plans of the routes are from Shenzhen to its surrounding cities (Hong Kong included) to promote great social interests and support for the sustainable and clean mobility future.

To further the impact beyond November 2010, a **Shenzhen Announcement** will be developed and made in **EVS25** aiming at calling all global efforts to contribute and realize a sustainable mobility revolution to create a sustainable, clean and environmental-friendly world in according with the resolution of the Copenhagen Meeting held in Denmark in 2009 autumn.

All interested in **EVS25**, please log on to <http://www.evs25.org> to collect more information, to enroll in the symposium, to submit a paper or to register for exhibition.
